

## Cookbook application

Write an application that uses the Cookbook API.

The application should offer the following functions:

- User sees an overview of all recipes
  - User can add recipes
  - User can bookmark recipes
  - User can display bookmarked recipes
  - User can calculate portions
  - User can display his recipes
  - User can delete his recipes
  - User can rate and comment on recipes
  - User sees rating and comments
  - User can filter recipes by category
  - There should be a login and registration
  - User can remove bookmarked recipes
  - User sees details of the recipe (chef)
  - User can search via tags (if a category is selected, this should be included in the search)
- 
- axios/fetch/etc. (httpRequests)
  - redux
  - routing
  - responsive design
  - mobile first
  - Use of JavaScript functions where appropriate (map, slice, etc.)
